**Response to CEAB Interrogatory 29**

**CEAB-29      Please explain why the CT value for the 2007 actual energy from the CELT 2008 of 33,947 GWH is 2.5% higher than the sum of the 2007 actual net electrical energy output requirements as reported by CL&P, UI, and CMEEC.**

**Response:**      For 2007, the ISO energy of 33,947 GWH for Connecticut is approximately 1.9% higher than the total of the energy outputs reported by CL&P (25,185 GWH), UI (6,119 GWH) and CMEEC (2,010 GWH ). The ISO energy value for Connecticut is based on Revenue Quality Metering of all generation and tie lines within Connecticut and the ISO control area. Without knowing how the utilities calculated their actual net electrical energy output, the ISO cannot explain the difference.
